
Joomla 1.5 SEF - Bug Read Full Article - 404 erro

Posted by serrbiz - 2008/04/25 09:12

Hi. I'm running version v2.2 on Joomla 1.5. Works great, but for the Read Full Article when SEF is turned on. Such a case causes a 404 error.

When SEF is off, it works great.

I think the best fix for this is to override the SEF completely.

The Read Full article links do NOT need to be SEF.

So, I think if we can hardcode the path somewhere and in the source files, that would be great.

Something like this would be great.

.../components/com_feedpost/feedpost.php?url=VAR

I looked at source code and couldn't figure it out. I know it has something to do with \$link..

Also, a "back button" to on the read full article iframe back would also be nice...though, I can do that with a simpel JS if needed...

M.

Hi, sorry for the delay, it's been a busy week.

The problem you say has been solved on version 2.2.1 (or it should be solved at least...;-)) Please try installing that version, also remember to backup your db before uninstalling so you don't loose the data...

Best regards,
Mario

Hallo Mario,

On the frontpage the link is like: http://www.test.com/components/com_feedpost/feedpost.php?url=url.html&site=test.com

Whilst in a category it could be like:

http://www.test.com/news/a/components/com_feedpost/feedpost.php?url=url.html&site=test.com

Well, of course the latter isn't right. Could this be changed (in a new version, or right here)?

I'm running 2.7 on J1.5.7

Best regards,

Mark
