## feedback for new updates

Posted by Arroyo - 2008/05/07 14:25

---

For new version, is necessary to uninstall and reinstall the component?  
in that case I will need to rewrite all my url feeds again :S  
Is possible to create only an updater file with new features?

Anyway the new features looks great, the publish/unpublish bottom is absolutely necessary for my testing feeds ;)

Very nice work.

But in my case, I still have the same problem with the Spanish special characters, something cutting the word and the rest of the feed disappears when appears an accent or other.

If disable iconv, then the special charts change to:

Ã¡ - á  
Ã© - é  
Ã­ - í  
Ã³ - ó  
Ã¡ - ú  
Ã° - ú  
Ã± - ñ  
Ã® - ®  
Ã¸ - ø  
Ã¸ - Ñ  
â€¢ - •

We will work on a update query on the installer package so you don't loose all when installing an update.  
Multibyte should work, but seems like simplepie has a problem with them, maybe if you set your encoding to utf-8 all will work, as simplepie handles utf well...

Best regards,  
Mario

PS: Sorry for the delay, I had to update the site and many jobs on stack...

## windows-1252 for spain characters

Posted by Arroyo - 2008/05/14 12:57

---

Character coding windows-1252

¡You are a G E N I U S!

Works perfectly!

I know that you had spent some many hours to resolve that, thank you to much for your time Mario, now feed2post is really a great extension for joomla, for me the very best extension of the year! ;)

Thank you for your support and patience waiting for the bugfix...

Also, can you vote for feed2post at [extensions.joomla.org](http://extensions.joomla.org) ? that'll help me a lot...

---

Best regards, thanks again for your support (and vote ?)

Mario
