## Nothing is posting

Posted by aaroncunn - 2008/06/18 10:36

---

I just installed Feed2Post on my site and everything seems to be configured properly but nothing is getting posting. when i click view item it does come up with the items but when I post nothing happens. Anyone know how to fix it?

I'd need the following info to help you more:

Feed2post version

Feed url

Joomla version

Description of your actions in detail. (maybe you forgot to click the checkboxes?)

Best regards,

Mario

feed2post 1.6.2

<http://www.skysports.com/rss/0,20514,11661,00.xml>

Joomla! 1.0.13 Stable

I clicked the boxes, clicked items, click on the item listed and clicked post. And nothing gets posted.

I've checked the feed source and the system is working as expected with this feed, check the article manager to see if the items are there as pending publication, as most of the time that's the problem...

Best regards,

Mario

I am facing the same problem. I get the listing of items, but POST is not working.

I have the same problem. I can fetch items but nothing is posted when clicking "POST" button. I tried POSTALL and it

---

also does not work..

First of all, sorry for the delay, I've been really busy updating the three softwares for bugfixes and new features... I hope that this issue is fixed on the new release, at least it should be so, can you please download and install the latest f2p and let me know if the problem is there?

Best regards,  
Mario
