
Not working/Not Showing Categories/Not Posting ERR

Posted by CrashX - 2008/06/28 15:30

Joomla 1.12
Feed2Post 1.63

Problem::(

When adding a "NEW" item, i get an error listed on IE7 taskbar, before i add anything at all or though anything error code;

Line: 326
Char: 1912
Error: Syntax error
Code: 0
URL: http://www.-----.com/administrator/index2.php

So I fill everything that is need, and when I select a Section, I get a New Error code;

Line: 470
Char: 1
Error: 'sectioncategories' is undefined
Code: 0
URL: http://www.-----.com/administrator/index2.php

It wont show a the categories, so I cant select a category, so I just click save, and nothing shows.

I've look all over the place and Cant find a fix, so i repay, to get some support, please help me... Thank YOU :)

I'd strongly suggest that you update your joomla install to at least 1.14 (latest 1.15 would be really nice) joomla has fixed a lot of system bugs and security issues, you shouldn't keep an outdated system...it's not safe..

Also, for the bug you report, the cause usually lays on ie javascript interpreter and some other times the problem is the admin template used (Some templates have a badly ended javascript or a conflicting function name or something that interferes with the normal f2p functions...) try setting up the standard joomla admin template and if that doesn't work try updating joomla to the latest version, and/or try using firefox...

This error is something not usual and should lie in the combination of this items, feed2post has at least 1100 users and this is the first time I get a report of this kind...seems much like a combination issue...I'm pretty sure that the code does work, but if the changes I suggest doesn't work for you, let me know and we'll find and solve the code problem...(if any)...

Best regards,
Mario

Okay, i will be updating it.

But Now I have another problem;

I install the Cron, and configure it, and its doing the Post All, the problem, is that it will List the Entire RSS into each item, again and again.

example

Should be like

Civil Tiltrotor in Flight Testing

Bell Agusta 609 flight tests in Texas and Italy has taken the civil tiltrotor past 300 knots, 25,000 feet and to fore and aft CG limits. The partners hope for deliveries in 2011.

Pretty much it will copy the entire rss results on to each article.

I try searching for a solution, couldn't find anything.:(

Thank You for you reply...

Hmm, interesting, seems like you found a bug, can you tell me which version of cronjob you have installed ? Also, please provide me all details of your issue so we can figure it out ASAP.

Best regards,
Mario

This is weird, it's the only case I have with problems at javascript level, can you provide me access details to the site so I can check on the live site what's going on ? I'd only need to get access to joomla admin (to get f2p displayed and try to add a feed and do some post) if it's possible for you, please use the contact form to send me the details, DO NOT POST THEM HERE, we don't want all the users accessing your site...

Best regards,
Mario

Re:Not working/Not Showing Categories/Not Posting ERR

I email my login info, Admin Level.

Joomla Updated Version 1.13
Feed2Post Uninstall DB/Files removed and Re-Install Version 1.63
CronJob Version 1.41

Problem:

If I select a single item, and click post, it will do the post correctly, but I use the CronJob, it will copy each item, under the item it self, posting all the RSS content into each section...

Look for my email, it has all the info for login, and urls.

Thank YOu for replying...

Dear CrashX, sorry for the delay, I found and fixed some bugs that may be causing this problem you have, please update to the latest f2p and cronjob so you can get rid of this problems...

Sorry once again for the delay in my reply, but I've been really busy trying to fix all softwares and adding the new features for this release...I hope you can understand...

Best regards,
Mario
