
Upgrading Feed2Post 2.5

Posted by Sept_de_Neuf - 2008/07/15 20:37

Hello,

Thank you for the wonderful product and the updates. It is getting to near perfect :side:

I have upgraded from 2.46 to 2.5 and have had no problems. There are two files included in the update that don't match the 2.46 on my server. These are the index2.php and linker.php. Do these go somewhere or do I just omit them?

Please ignore those files, they were packed by mistake...sorry for that...

Best regards,
Mario
