## Embedded videos and Meta data

Posted by blakey87 - 2008/03/27 07:44

Now everything seems stable, and working fantasticly(upgraded cron and it works super great)I was wondering if its possible to have feed2post add a meta description and meta key words, this would be great for google and other se maybe it could use the key word filter for the meta keys and the title of the articale for the meta description, this would be awesome.

Also, in earlier versions of feed2post,embdedded videos used to come through, they dont come though any more probably due to security or something, would be great if they could be activated again

Id rather remove peoples google ads and certain annoying other content hehe from the posts :woohoo: ;)

Hmm, maybe video stoped working when I changed the rss processing library... I've not changed any other thing that could affect the content, so it must be that, I'm affraid that if that's the case...I won't be able to do much...

Meta keywords and title will be added, that's a great extension for this component, the thing will be to define how they will be added, if by title, content words, well...I need to find that out and we'll have that done.

Filtering the content scripts it's a possible feature, we'll analyze it too..

Best regards,Thanks for the feedback.

Mario
