## Reverse ordering

Posted by Tubbergen - 2008/07/26 14:50

---

Whenever I try to post my items, they get ordered in reverse in the content category. So basically the newest data is getting the lowest ID and the oldest data has the highest ID.

The items appear in the right order (by date, descending) after I check a feed and click on 'items'. Then I would like some feed data to be posted, so I check some and post them. When I go to my Article Manager/Front Page Manager all items are ascending by date.

I'm using J! 1.5.4 and Feed2Post 2.5, no cronjob or anything else.

You are right, usually the items are ordered in reverse order, as the feeds are processed from top to bottom on the item list, and when the items are stored, they get the reverse date ordering (related to the article ID) we'll add a feature to select the post order for the users who need it.

Best regards,  
Mario
