
Google Feed Layout

Posted by Sept_de_Neuf - 2008/08/01 16:52

Hello,

I was able to fine tune the Google feeds fetched by Feed2Post. I have replaced the bottom of utilities.php in com_feedpost_25 and utilitiescron.php in conjob_feed2post_16 with the following:

```
function parselinks ($datatext) {
    $text = preg_replace("#
(.*?)
#si", "", $datatext);
    $text = preg_replace("#", $text);
    $text = preg_replace("##si", "", $text);
    $text=preg_replace("/
```

Thank you for your help and feedback, your contributions are much appreciated, we'll have your credits shown if we use the code.

Also, our users are invited to use it on their needs.

Best regards,
Mario

Hello,

Can you tell me how to remove (as an example):

<http://news.google.com/news/url?sa=T&ct=nl/0-0&fd=R&url=>

from the feed?

Best regards,

Mark
