
New Error Running Cronjob ?related to Joomla 1.5.5

Posted by cpm doc - 2008/08/01 07:27

I have edited the admin.feedpost.php in /administrator/components/com_feedpost to enable the use of YooEffects lightbox:

i.e.

```
$linkback="" . JText::_("Read Full Article"). " " ;
```

And it was working for Cronjobs when I was calling the job using:

```
lynx -source http://www.domain.org/cronjobs/website/cronjob.php having configured the cronjob for 1.5.x
```

Things were working well but having updated to 1.5.5 then when I manually add posts the finish date is entered and the re="lightbox..." is inserted but NOT when I call it as a Cronjob.

Can you help?

Chris

Thank you for your help and feedback, your contributions are much appreciated, we'll have your credits shown if we use the code.

The problem may be that the iframe feature is enabled and you've fixed only one of the linkbacks...you should edit the cronfunctions file and include the same fix to make it work under cron.

Best regards,
Mario

Excellent!

That is the fix for automatically adding Lightbox code in to the read link:

```
rel="lightbox;width=1100;height=700"
```

following display="_blank" in cronfunctions.php

Incidentally, there appeared to be one entry that read:

```
display="_blank">
```

that should I think read:

```
display="_blank"/>
```

in cronfunctions.php

Thank you for the fix, we'll correct the code on the next release.

Best regards,
Mario
