
Lightbox / Shadowbox Feature

Posted by adisoft - 2008/07/15 13:50

I would like to see a feature in the feed2post comp. that allows to open the rss feed links into a lightbox/shadowbox instead of opening a new browser window or iframe. There are several plugins for the shadowbox function on the market. They all use the following "rel=...":

Pixar Website

Anybody ?

Just a thought but you could enable show iFrame for postings and then edit the following file:

components/com_feedpost/templates/linkshow.tpl

Strip out the iFrame reference for the new window and instead use the same call as above but use {url} for the link.

I haven't time to try this out at the moment as I am not at home in order to edit the site. Do post the code if you get it working.

I am looking to do the same thing. I would try to edit the following file having enabled the iframe option:

components/com_feedpost/templates/linkshow.tpl

Strip out the reference for the iFrame and instead use the call as you have posted it for the Pixar site but instead use {url} for the link.

OK...I have got back home and had a look at the problem.

Do the following:

Edit the following file:

administrator/components/com_feedpost/admin.feedpost.php

Look for the line:

```
$linkback="" . JText::_("Read Full Article")." ";
```

and change to

```
$linkback="" . JText::_("Read Full Article")." ";
```

Make sure iFrame option is turned off.

Here it is working on a test site:

http://www.uksurgeon.org/hernia/index.php?option=com_content&view=article&catid=35%3Ahernia-helath-news&id=78%3Amedical-notes&Itemid=59

Enjoy...Chris
